

Today's manufacturing companies, faced with tight profit margins, escalating labor costs, and increasing competition, work hard to adopt highly efficient practices

“For many manufacturers, InfoTronics delivers the critical tools needed to eliminate waste and improve employee time and attendance processing.”

For many manufacturers, InfoTronics delivers the critical tools needed to eliminate waste and improve employee time and attendance processing.

Fair, Consistent Time and Attendance Processing

Web-enabled Attendance Enterprise helps companies maximize their labor utilization by automating complicated pay rules and shift differentials, controlling overtime, and reducing employee grievances by enforcing company policies impartially and consistently.

Improvements begin with the data collection process. One manufacturer recently used InfoTronics data collection system to easily integrate time and attendance badges with existing photo IDs and security access systems.

The company automated and streamlined the collection and management of employee time for both hourly and salaried work forces including leave requests, accrual balances, status changes and employee inquiries.

Accurate, Detailed Reporting

Companies can easily measure labor utilization across the enterprise, by location, by department or individual to measure performance. Detailed reports assist the labor relations department with contract negotiations by providing accurate, detailed employee labor and attendance information.

InfoTronics solves the most complex manufacturing work force challenges of this labor-intensive industry. The results are real savings and improved overall operational performance.
