attendance® ON DEMAND

Intelligent Terminal I.T. 3100 Time Recorders

Intelligence at the source of data collection

I.T. 3100 Finger Reader

Employees, supervisors, and the entire organization stay connected by collecting labor data right at the source—the time clock. The I.T. 3100 provides ATM style function keys, multiple reader options and can withstand the rigors of industrial environments. Employees punch In and Out and perform other advanced time and attendance actions using a badge, PIN, or their finger template.

Function keys display labor information such as scheduled shifts, worked hours and benefit information. Employees simply press a function key to perform departmental transfers, enter callback punches, and even enter tip information.

Supervisors can add punches and schedules, credit hours or dollars, and pay lunches right at the time clock, addressing everyday issues quickly and efficiently. Punch restrictions can also be used to prevent employees from punching In and Out at unauthorized times. This helps reduce labor costs by controlling unauthorized overtime and enforcing your pay policies. In addition, biometric finger templates identify employees and prevent buddy punching—the costly situation where one employee punches for another.

Advanced Technology for Today's Labor Management Needs

The I.T. 3100 is an Internet-compatible device that is easy to install. Simply plug into a power outlet and Ethernet port. With minimal configuration, the I.T. 3100 communicates immediately with hosted systems such as Attendance on Demand.

Industry-leading "HTTP Push" technology sends transactions to the time and attendance system. There is no need to poll the time clock. The I.T. 3100 continues to collect employee transactions even when the network is down, automatically forwarding transactions to the time and attendance system when the connection is re-established.

I.T. 3100 Specifications

The I.T. 3100 is built using the Linux operating system. It is suitable for industrial and production environments.

- **Instant Operation:** A true plug and play device.
- **Flexible Design:** Operates with locally installed or hosted software.
- **Reliable:** Attractive, enclosed keyboard and case with no moving parts make it maintenance free.

Technical Specifications

Capacity	1000 Employees
Screen Display	High quality 100 x 160 pixel full graphic display
Keyboard	Full numeric keyboard, eight function keys with durable, enclosed construction
Communications	Web compatible HTTP Push through Ethernet connection
Collection methods	PIN entry HID proximity badges Bar code: Codabar 3 of 9, 2 of 7 Magnetic stripe: Track I ASCII or Track II BCD Biometric: Identify

Function keys		
	Supervisor edits:	Add punch/schedule Credit hours/dollars Pay Lunch
	Employee Review:	Last punch, hours, schedule, benefits
	Employee Edits:	Transfer workgroup Add Callback punch Enter tips

I/O Module	Supports an external bell that can be rung to indicate shift start and end, breaks, and lunches
Biometrics	Suprema finger reader sensor Multiple finger templates
Power requirements	12V DC, 1amp

Options		
	Internal Backup Battery	Continued operation during power outages
	Power Over Ethernet (POE)	Provides both power and network connectivity through the Ethernet cable

Compliance	Conforms to the Americans with Disability Act (ADA) specification
