

## A national banking center uses Attendance Enterprise throughout 16 regional locations to access real-time data in an online environment

“The banking institution is better able to manage our greatest resource — our employees.”

Supervisors call up employee attendance reports as needed— without manual intervention necessary in the past.

The key to these achievements is Attendance Enterprise, a web-enabled time and attendance management system from InfoTronics, Inc.

### **Real Information in Real Time**

With Attendance Enterprise, regional bank managers use real-time information to effectively monitor and enforce overtime, sick, holiday and vacation policies. Explains one administrative manager, “Instead of relying on me to pull together outdated summary reports, supervisors at each location get the current picture of employee attendance themselves, as needed.”

Online overtime reports show supervisors whether premium pay is appropriately applied. Sick and holiday pay classifications clearly show employee attendance patterns.

Another advantage is that employee schedules are online, readily available throughout the 16 banking centers.

### **Seamless, Streamlined**

An industry-standard payroll interface converts end-of-pay-period totals into a readable format for the payroll vendor without any manual intervention. As the bank continues to automate processes, they receive product maintenance and configuration over the internet.

Concludes the manager, “I reduced the time spent handling employee attendance data by 12 hours each payroll. Attendance Enterprise frees me from printing and faxing weekly punch detail reports, manual editing, and overtime, holiday and sick report generation. The banking institution is better able to manage our greatest resource—our employees.”
